Abstract

Let $G$ be a vertex colored graph. The minimum number $\chi(G)$ of colors needed for coloring of a graph $G$ is called the chromatic number. Recently, Adiga et al. [1] have introduced the concept of color energy of a graph $E_c(G)$ and computed the color energy of few families of graphs with $\chi(G)$ colors. In this paper we derive explicit formulas for the color energies of the unitary Cayley graph $X_n$, the complement of the colored unitary Cayley graph $(X_n)c$ and some gcd-graphs.

Keywords: coloring of a graph, unitary Cayley graph, gcd-graph, color eigenvalues, color energy.
